

Creative Agent — Demo Guide

Audience: Operations, account managers, and business stakeholders
Model: GPT-5.2 | **Tools:** 25 active | **Memory:** Persists across the session

How to Use This Guide

Each section describes one tool available to the Creative Agent. During a demo, paste the **Live Prompt** directly into the chat. The agent will pick the right tool automatically — no configuration needed.

The agent can also chain multiple tools in sequence. For example: generate a product image → remove background → add to a promotional banner → overlay a watermark → attach a voiceover. All in one conversation.

Tool Index

#	Tool	Category	Key Capability
1	Generate or Edit Image	Image	Free-form AI image generation and editing
2	Styled Product Photoshoot	Image	Batch product photography in multiple scene styles
3	Promotional Banner	Image	Ad banners with headline, layout, and product placement
4	WhatsApp Marketing Post	Image	Mobile-optimized WhatsApp ad images
5	Instagram Static Post	Image	Instagram feed images with marketing layouts
6	BPC Product Image	Image	BPC-flow product images
7	Clone Reference Creative	Image	Copy a reference ad's visual style onto your products
8	Image Super Resolution	Image Enhancement	Upscale low-res images to print/broadcast quality
9	Remove Background	Image	Clean product cutout with transparent

9	Remove Background	Enhancement	background
10	Composite Images	Image Enhancement	Layer multiple images onto a base canvas
11	Generate AI Video	Video	Text-to-video with Google Veo 3.1
12	Generate Fashion Video	Video	Flatlay/model 5-second fashion videos
13	Generate Look Book	Video	Stylized product look-book video
14	Clone Video Creative	Video	Replace products in an existing ad video
15	Image Transition Video	Video	Cinematic animated transition between two images
16	Video Edit (AI Transform)	Video Editing	AI-powered video-to-video scene transformation
17	Advanced FFmpeg Edit	Video Editing	Precise cuts, overlays, scaling, and format ops
18	Add Watermark to Video	Video Editing	Brand logo overlay on any video
19	Synthesize Video Speech	Video + Audio	Add synced TTS narration directly onto a video
20	Premium Voice Cloning	Audio	ElevenLabs/Minimax voice cloning (EN + AR)
21	Affordable Voice Cloning	Audio	Resemble AI voice cloning — English, budget-friendly
22	Generate Music Clip	Audio	AI background music from a text description
23	Arabic Text-to-Speech	Audio	ElevenLabs TTS for Arabic language
24	Lipsync Video	Video + Audio	Animate a portrait photo to speak your audio
25	Task Planner (write_todos)	Agent Intelligence	Auto-plans multi-step creative workflows
+	Similar Products (Bonus)	Discovery	Find complementary products for cross-sell creatives

Image Tools

1. Generate or Edit Image

What It Does

The most flexible image tool. Generates any image from a text prompt, or edits an existing image — changing backgrounds, colors, objects, or style. Within the same session, it automatically reuses your previously shared product images so follow-up edits stay consistent without you repeating URLs.

Demo Use Case

A brand wants to quickly test different background moods for a skincare product before committing to a full photoshoot.

Live Prompt

```
Generate a professional product image of this skincare serum bottle on a clean marble surface with soft morning light and botanical leaves in the background. Resolution 2K, square format.  
[paste product image URL]
```

Required Inputs

- `prompt` — describe what you want (required)
- `image_urls` — reference product images to edit (optional; auto-reused from session)
- `aspect_ratio` — e.g., 1:1, 16:9, 9:16 (optional)
- `resolution` — 2K (default), 4K (optional)
- `enhance_prompt` — let the AI improve your prompt automatically (default: off)

Expected Output

Public URL of the generated or edited PNG image.

Why It Matters

Replaces expensive reshoots for concept testing. Teams can iterate on visual direction in minutes instead of days.

2. Styled Product Photoshoot

What It Does

Generates a batch of product images across multiple scene types simultaneously — flatlay, model-worn, lifestyle, industrial — all from the same product photo. Supports seasonal

mood, color/brand customization, accessory layering, and model reference images.

Demo Use Case

An apparel brand launching a summer collection wants 3 flatlay shots, 2 model-worn shots, and 2 lifestyle images in one go, all consistent with their coral color palette.

Live Prompt

Generate a full product photoshoot for this dress. I want:

- 3 flatlay images on a sandy beach texture
- 2 lifestyle images showing the dress in a café setting
- 2 model-worn images

Use a summer mood, coral color palette, and brand name "Lumière".
[paste product image URL]

Required Inputs

- `product_images` — list of product image URLs (required)
- `image_kinds_req` — scene types requested (flatlay, lifestyle, model-worn, industrial)
- `number_of_images_per_kind` — how many per scene type
- `season`, `mood_text`, `color`, `brand` — style parameters (optional)
- `accessory_images`, `model_ref_image` — optional references

Expected Output

A batch of public image URLs, one per generated shot.

Why It Matters

Produces an entire content library in a single request. Cuts photoshoot production time from weeks to minutes and enables rapid A/B testing of visual styles.

3. Promotional Banner

What It Does

Generates a complete promotional banner — headline text, product placement, marketing layout, and color-matched design — optimized for paid advertising. Supports multiple campaign goals (conversion, awareness, engagement), display modes, and aspect ratios.

Demo Use Case

An e-commerce team needs a 16:9 banner for a Black Friday sale with "50% Off" headline, product image, and a dark, premium color palette.

Live Prompt

Create a Black Friday promotional banner with headline "50% Off Everything",

dark premium color palette, conversion goal. Use this product image.

Aspect ratio 16:9.

[paste product image URL]

Required Inputs

- `products_image` — product image URLs (required)
- `goal` — campaign goal (conversion, awareness, engagement)
- `headline` — main text (optional but recommended)
- `one_line_brief` — creative direction note
- `display_mode` — image arrangement style
- `aspect_ratio` — 16:9, 1:1, 9:16, etc.
- `color_palette`, `model_ref_image` — optional

Expected Output

Public URL of the rendered banner image.

Why It Matters

Eliminates the design bottleneck for campaign launches. A team with no designer can produce production-ready ad banners in under 60 seconds.

4. WhatsApp Marketing Post

What It Does

Generates mobile-optimized images specifically designed for WhatsApp marketing and status posts. Auto-applies art direction, typography, and product presentation suited to WhatsApp dimensions and viewing context.

Demo Use Case

A local retailer wants to send a flash sale announcement via WhatsApp broadcast with a polished product image.

Live Prompt

Create a WhatsApp marketing image for a flash sale on these sneakers.
Include a "Today Only - 30% Off" message with a clean, energetic style.
[paste product image URL]

Required Inputs

- Product images and sale messaging in the prompt

Expected Output

Public URL of a WhatsApp-optimized marketing image.

Why It Matters

WhatsApp is a primary sales channel in MENA markets. Professional-looking broadcast images outperform plain-text messages significantly.

5. Instagram Static Post

What It Does

Generates Instagram feed-optimized images with professional marketing layouts, ideal aspect ratios, and visual presentation tailored to Instagram's audience and browsing context.

Demo Use Case

A beauty brand wants a polished Instagram feed post for a new lipstick launch, grid-ready and brand-consistent.

Live Prompt

```
Create an Instagram feed post for our new matte lipstick launch.  
Use a minimalist aesthetic with rose gold tones and show the product  
elegantly with the tagline "Bold by nature".  
[paste product image URL]
```

Required Inputs

- Product images and creative direction in the prompt

Expected Output

Public URL of an Instagram-optimized feed image.

Why It Matters

Instagram feed aesthetics directly affect brand perception and conversion rate. Consistent, professional posts build trust and drive click-through.

6. BPC Product Image

What It Does

Generates product images using the BPC (Brand Presentation Creative) workflow — a structured flow with specific layout and presentation rules for BPC-style campaigns.

Demo Use Case

A brand running BPC-format campaigns needs product images that comply with the required BPC presentation standard.

Live Prompt

Generate a BPC product image for this skincare set using the standard flow.
[paste product image URL]

Required Inputs

- `flow_name` — which BPC flow variant to use
- `product_images` — product image URLs
- `description` — optional product description

Expected Output

Public URL of the BPC-formatted product image.

Why It Matters

Ensures compliance with BPC campaign presentation requirements without manual design work.

7. Clone Reference Creative

What It Does

Takes any reference ad or banner image and replicates its visual style, layout, and composition — but with your own products substituted in. Ideal for adapting competitor creatives, testing styles from winning ads, or maintaining visual consistency across markets.

Demo Use Case

A brand sees a high-performing competitor ad and wants to produce the same style with their own product catalog.

Live Prompt

Clone the style of this reference ad banner onto our product images.
Keep the same layout and color mood but use our products.
Reference: [paste reference banner URL]
Products: [paste product image URLs]

Required Inputs

- `banner_reference` — URL of the reference creative (required)
- `product_urls` — your product image URLs (required)
- `model_reference` — model image if the reference includes a person (optional)
- `aspect_ratio` , `resolution` — output dimensions
- `text_changes` — any text substitutions (e.g., swap headline copy)
- `extra_notes` — style guidance

Expected Output

Expected Output

Public URL of the cloned creative with your products.

Why It Matters

Lets teams learn from winning ad formats — including competitor creatives — without starting from scratch. Accelerates creative testing by replicating proven visual formulas.

Image Enhancement Tools

8. Image Super Resolution

What It Does

Upscales a low-resolution image by 2× (or more) using AI, recovering sharp details without visible pixelation. Uses Real-ESRGAN — the industry-standard AI upscaling model.

Demo Use Case

A product photo received from a vendor is too low resolution for ads but the vendor can't provide a better version.

Live Prompt

Upscale this product image to 2x resolution so it can be used in ads.
[paste image URL]

Required Inputs

- `image_url` — the image to upscale (required)
- `scale` — upscale factor, default 2 (optional)

Expected Output

Public URL of the higher-resolution image.

Why It Matters

Low-resolution creatives are rejected by ad platforms and reduce CTR. This restores usability without a reshoot.

9. Remove Background

What It Does

Removes the background from any product or subject image, leaving a clean transparent cutout. The result is ready to be placed on any custom background, banner, or composite.

Demo Use Case

Demo Use Case

Product photos came with a cluttered background and need to be isolated before placing them on a campaign banner.

Live Prompt

Remove the background from this product photo so I can place it on a clean white background.
[paste image URL]

Required Inputs

- `image_url` — the source image (required)

Expected Output

Public URL of the background-removed image (transparent PNG).

Why It Matters

Clean product cutouts are required for professional ad creatives. Automating this eliminates hours of manual Photoshop work per product.

10. Composite Images

What It Does

Layers multiple images on top of a base image — stacking them bottom-to-top, left-top aligned. Think of it as a smart image merge: you control which images go on top and in what order.

Demo Use Case

A designer wants to place a product cutout and a brand logo onto a lifestyle background in one step.

Live Prompt

Composite these images together:
- Base: [lifestyle background URL]
- Layer 1: [product cutout URL]
- Layer 2: [brand logo URL]

Required Inputs

- `base_image_url` — defines the output canvas size (required)
- `overlay_image_urls` — images to stack on the base, in order (required)

Expected Output

Public URL of the final composited PNG

Public URL of the final composited PNG.

Why It Matters

Enables precise, programmable image assembly — useful for templated creatives, multi-product ads, and overlay workflows that need to be repeated across many SKUs.

Video Generation Tools

11. Generate AI Video

What It Does

Generates short AI videos from a text prompt using Google Veo 3.1 — one of the most advanced text-to-video models available. Supports an optional reference image to anchor the visual style. Produces videos with synchronized audio.

Demo Use Case

A fashion brand needs a 6-second hero video for a new collection launch with no production budget.

Live Prompt

Generate a 6-second video of a model in a flowing white summer dress walking through a sunlit olive grove in Italy. Cinematic, golden hour. 16:9, 1080p.

Required Inputs

- `prompt` — video description (required)
- `aspect_ratio` — 16:9 or 9:16 (required)
- `duration_seconds` — 4, 6, or 8 seconds
- `resolution` — 720p, 1080p, or 4k
- `image_url` — optional reference image (use with duration=8)

Expected Output

Public URL of the generated MP4 video with audio.

Why It Matters

Video ads consistently outperform static ads in ROAS across Meta, TikTok, and YouTube. This removes the production cost barrier entirely.

12. Generate Fashion Video

What It Does

Generates 5-second fashion videos using animated image morph transitions — flatlay shots or model-worn shots seamlessly flowing into each other. Designed specifically for Meta Ads and social commerce formats.

Demo Use Case

An apparel brand wants a polished 5-second Meta video ad showing three different angles of a new jacket.

Live Prompt

Generate a 5-second fashion video for this jacket, showing 3 flatlay angles with smooth transitions. Aspect ratio 1:1 for Meta feed.
[paste product image URLs]

Required Inputs

- `product_image_urls` — product images (required)
- `image_kinds` — scene types (flatlay, model-worn)
- `aspect_ratio` — 1:1, 9:16, 16:9
- `watermark_url` — optional brand logo
- `target_duration_seconds`, `season`, `mood_text`, `color`, `brand` — optional

Expected Output

A `MetaAdsVideoGenerationResponse` containing the video URL.

Why It Matters

Reels and short-form video now drive most e-commerce discovery. This tool makes it possible to scale video ad production across an entire product catalog.

13. Generate Look Book

What It Does

Produces a short, stylized look-book video from a collection of product images — with professional pacing, transitions, and optional watermarking. Ideal for seasonal campaigns and collection launches.

Demo Use Case

A lifestyle brand needs a 15-second look-book video showcasing their Ramadan collection across 5 products.

Live Prompt

Create a look book video for our Ramadan collection using these 5 product

images. Portrait format (9:16), add our logo watermark in the bottom right.
Products: [paste product image URLs]
Watermark: [paste logo URL]

Required Inputs

- `product_images` — list of product image URLs (required)
- `aspect_ratio` — default 9:16 (portrait)
- `watermark_url`, `watermark_position`, `watermark_opacity` — optional branding
- `considerations` — style or pacing notes

Expected Output

A `LookBookResponse` containing the video URL.

Why It Matters

Look-book videos drive collection discovery and work natively across Instagram Reels, TikTok, and WhatsApp Status.

14. Clone Video Creative

What It Does

Takes an existing advertisement video and replaces up to four objects/products within it — preserving the original scene composition, camera movement, transitions, and overall flow. The result is a new ad featuring your products in a proven creative structure.

Demo Use Case

A brand finds a high-performing video ad template and wants to replace the featured products with their own SKUs while keeping the exact same storytelling structure.

Live Prompt

Clone this video ad, replacing the featured product with our handbag.
Keep the same scene flow and transitions.
Video: [paste video URL]
Our product front image: [paste product image URL]

Required Inputs

- `video_url` — the reference video to clone (required)
- `first_object_front_image` — main product frontal image (required)
- `first_object_additional_images` — side/back views (optional, improves quality)
- Up to 3 additional objects with the same structure
- `aspect_ratio`, `generate_music`, `watermark_url` — optional

Expected Output

A `VideoCloneResponse` containing the URL of the cloned video.

Why It Matters

Winning creative structures are hard to find. Once found, this tool lets you replicate them across your entire catalog without re-producing the video from scratch.

15. Image Transition Video

What It Does

Generates a cinematic animated video that smoothly transitions between two still images. Uses the Kling 2.5 Turbo Pro model to create natural, fluid motion between any two visual states.

Demo Use Case

A brand wants a 5-second animated product reveal: starting from a flat white background image, transitioning to the styled product shot.

Live Prompt

Create a smooth 5-second transition video from this product studio shot to this lifestyle scene image.
Start: [paste image URL]
End: [paste image URL]

Required Inputs

- `start_image` — first image URL (required)
- `end_image` — second image URL (required)
- `duration` — 5 or 10 seconds (default: 5)
- `custom_prompt` — optional motion description
- `aspect_ratio` — default 16:9

Expected Output

Public URL of the transition video MP4.

Why It Matters

Adds motion and cinematic energy to static product imagery at minimal cost. Works especially well as a teaser format in Stories and Reels.

Video Editing Tools

16. Video Edit (AI Transform)

What It Does

Transforms an existing video using AI — changing the scene, environment, products, or styling while preserving the original motion, camera work, and composition. Uses the Kling model with special `@Video1` and `@Element1` reference syntax.

Demo Use Case

A brand has a model-walking video in a neutral studio setting and wants to adapt it to a beach environment for a summer campaign.

Live Prompt

Transform this video: keep the model's walking motion from `@Video1` but change the environment to a sunny beach at golden hour.

Video: [paste video URL]

Duration: 5 seconds, 16:9

Required Inputs

- `video_url` — reference video (required)
- `prompt` — transformation description using `@Video1` syntax (required)
- `elements` — product reference images (optional; referenced as `@Element1`)
- `aspect_ratio` — auto, 16:9, 9:16, 1:1
- `duration` — 3–10 seconds (default: 5)
- `keep_audio` — preserve original audio (default: false)

Expected Output

Public URL of the AI-transformed video.

Why It Matters

Adapts existing video assets to new campaign themes without a re-shoot. One video becomes the template; the agent produces the variants.

17. Advanced FFmpeg Edit

What It Does

Exposes the full power of FFmpeg for precise, deterministic video and audio operations: trimming, cropping, scaling, format conversion, GIF extraction, audio extraction, subtitle burning, and custom filter graphs. Uses `$input0` , `$input1` , `$output` placeholders.

Demo Use Case

A video needs to be trimmed to exactly 15 seconds, resized to 1080×1920 for Stories, and

exported as MP4.

Live Prompt

Trim this video to the first 15 seconds, resize it to 1080x1920 (portrait), and return it as MP4.

Video: [paste video URL]

Required Inputs

- `inputs` — list of media URLs (required)
- `ffmpeg_args` — FFmpeg arguments using `$input0`, `$output` placeholders (required)
- `output_extension` — file format (default: mp4)
- `output_prefix` — storage naming prefix

Expected Output

Public URL of the processed media file.

Why It Matters

No creative operation is too specific. When higher-level tools don't cover the exact requirement, this tool handles it without leaving the agent workflow.

18. Add Watermark to Video

What It Does

Overlays a brand logo or watermark image onto any video at a specified position and opacity. Accepts PNG logos with transparent backgrounds for clean results.

Demo Use Case

Every video generated for a campaign needs the brand logo in the bottom-right corner at 80% opacity before publishing.

Live Prompt

Add our brand logo to this video in the bottom-right corner at 80% opacity.

Video: [paste video URL]

Logo: [paste logo PNG URL]

Required Inputs

- `video_url` — the video to watermark (required)
- `watermark_url` — logo/image URL, PNG recommended (required)
- `position` — CENTER, TOP_LEFT, TOP_RIGHT, BOTTOM_LEFT, BOTTOM_RIGHT, BOTTOM_CENTER

- `opacity` — 0.0 to 1.0 (default: 1.0)

Expected Output

Public URL of the watermarked video.

Why It Matters

Brand protection and recognition at scale. Every AI-generated video can be automatically branded before delivery.

19. Synthesize Video Speech

What It Does

Takes a video and a script, generates a TTS voiceover from the text, and synchronizes the resulting audio with the video — returning a final video with the narration baked in.

Demo Use Case

A product demo video needs a professional English voiceover narrating the key product benefits, timed to the video length.

Live Prompt

Add this narration to the video, timed to the clip:
"Discover the next generation of skincare. Clinically proven. Naturally inspired."
Video: [paste video URL]
Language: English

Required Inputs

- `video_url` — input video (required)
- `text` — narration script (required)
- `language` — target language
- `default_voice_id` — preset ElevenLabs voice (optional)
- `custom_voice_id` — custom cloned voice (optional)

Expected Output

A `VideoSpeechSynthesizerWorkflowResponse` containing the final video URL with audio.

Why It Matters

Narrated video ads consistently outperform silent ones. This delivers complete, broadcast-ready video assets without a recording studio.

Audio Tools

20. Premium Voice Cloning

What It Does

Generates high-quality speech using ElevenLabs/Minimax voice cloning. Provide a sample audio clip and a script — the model clones the voice and speaks your text. Supports both English and Arabic.

Demo Use Case

A brand has an existing brand ambassador voiceover and wants to generate new ad scripts in their voice without rebooking the talent.

Live Prompt

```
Generate a 30-second voiceover using this voice sample reading:  
"Summer is here. Refresh your style with our new collection –  
available now at all outlets and online."  
Voice sample: [paste audio URL]  
Language: English
```

Required Inputs

- `text` — the script to speak (required)
- `audio_sample_url` — voice reference clip (optional; uses preset voice if omitted)
- `voice_id` — preset voice ID (alternative to sample)
- `accuracy` — cloning fidelity 0.0–1.0 (default: 0.7)
- `output_audio_format` — MP3 or WAV
- `need_noise_reduction`, `need_volume_normalization` — optional quality processing

Expected Output

An `AudioGenerationResponse` containing the audio file URL.

Why It Matters

Voice consistency builds brand recognition. This lets brands scale their voice identity across unlimited scripts and markets.

21. Affordable Voice Cloning

What It Does

Lower-cost voice cloning using Resemble AI's Chatterbox model. English-only, with controls for emotional intensity, pace, and creativity. Ideal for high-volume production where premium quality isn't required for every asset.

Demo Use Case

A team needs 50 product narrations voiced quickly for a catalog video series.

Live Prompt

Generate a product narration using this voice sample.

Script: "The Classic Leather Tote – handcrafted in full-grain leather, available in three colors."

Voice sample: [paste audio URL]

Required Inputs

- `text` — the script (required)
- `audio_sample_url` — voice sample (optional)
- `exaggeration` — emotional expressiveness 0.0–1.0 (default: 0.5)
- `pace_control` — speaking speed 0.0–1.0 (default: 0.5)

Expected Output

An `AudioGenerationResponse` with the audio file URL.

Why It Matters

Scales voice production for catalog-level content volume without proportional cost increase.

22. Generate Music Clip

What It Does

Generates original background music from a text description — specifying genre, mood, tempo, and instrumentation. Returns a ready-to-use audio clip at the requested duration.

Demo Use Case

A campaign video needs an upbeat, modern background track to match the product's youthful energy.

Live Prompt

Generate 30 seconds of upbeat, modern pop background music with a summer beach vibe, light percussion, and acoustic guitar. No lyrics.

Required Inputs

- `prompt` — music description (required)
- `duration` — clip length in seconds (required)

Expected Output

Public GCS URL of the generated audio file.

Why It Matters

Custom music eliminates licensing risks and lets every campaign have a unique sonic identity without a composer or music library subscription.

23. Arabic Text-to-Speech

What It Does

Generates professional Arabic-language speech from a text script using ElevenLabs. Uses a fixed, high-quality Arabic voice optimized for marketing content.

Demo Use Case

A Saudi e-commerce brand needs an Arabic voiceover for a Ramadan campaign video.

Live Prompt

Generate Arabic speech from this script:

تصل إلى ٥٠٪ على جميع المنتجات خلال شهر رمضان! لا تفوت العرض! اطلب الآن واحصل على توصيل مجاني

Required Inputs

- Arabic script text (via `ElevenlabsTextToSpeechRequest`)

Expected Output

An `ElevenlabsWorkflowResponse` with the audio URL.

Why It Matters

Arabic voice ads are essential for MENA markets. Localized voiceovers consistently outperform subtitle-only formats in regional campaigns.

Lipsync Tool

24. Lipsync Video

What It Does

Takes a portrait photo of a person and an audio file, and generates a video where the person appears to be naturally speaking the audio. Powered by ByteDance's Omni Human model — the most realistic lipsync available.

Demo Use Case

A brand has a product spokesperson photo and a voiceover, and wants a realistic speaking-head video without filming.

read this without filming.

Live Prompt

Create a lipsync video of this person speaking the audio clip.
Photo: [paste portrait image URL]
Audio: [paste voiceover URL]

Required Inputs

- `image_url` — portrait photo of the person (required)
- `audio_url` — the audio they should appear to speak (required)

Expected Output

Public URL of the lipsync video.

Why It Matters

Spokesperson videos drive 3–5× higher engagement than product-only creatives. This produces them without talent coordination, filming, or editing overhead.

Agent Intelligence

25. Task Planner (`write_todos`)

What It Does

When you give the agent a multi-step creative request, it automatically creates an internal task plan before executing — listing each step it intends to take. This makes complex workflows transparent, predictable, and easier to review.

When It Activates

Automatically, when the request involves 3 or more distinct steps. You don't need to trigger it manually.

Demo Use Case

You ask: *"Generate 5 product images, remove backgrounds from all of them, composite them onto a lifestyle background, and create a promotional banner."*

The agent will first write out its step-by-step plan, then execute each step.

Live Prompt

Take this product image, remove the background, place it on a marble surface background, generate a WhatsApp marketing post from it, and add our logo watermark in the bottom-right corner.
Product: [paste image URL]

Logo: [paste logo URL]

Expected Behavior

The agent plans: (1) `remove_background` → (2) `generate_or_edit_image` → (3) `whatsapp_marketing_post` → (4) `add_watermark_to_video`, then executes in sequence.

Why It Matters

Complex, multi-tool creative pipelines become reliable and reviewable. The agent doesn't guess — it plans first, then executes.

Bonus: Similar Products

Bonus. Similar Products

What It Does

When a `business_name` is provided in the session, the agent gains access to a product discovery tool. Given a user message and a product image, it returns a list of similar or complementary products from the brand's catalog.

When It's Available

Only when `business_name` is passed in the API request. The tool is injected automatically.

Demo Use Case

A customer asks "what goes with this jacket?" — the agent finds matching trousers, shoes, and accessories from the catalog.

Live Prompt

What products would complement this jacket for a complete winter look?
[paste product image URL]

Expected Output

A list of `ProductInfo` objects with product names, images, and details.

Why It Matters

Powers cross-sell and upsell creative workflows. The agent can autonomously build "complete the look" campaign assets from a single product prompt.

Multi-Tool Workflow Examples

These examples show how the agent chains tools in a single conversation turn.

Example A: Full Campaign Asset from One Product Image

Prompt:

Take this product photo. Remove the background, then create:

1. A 16:9 promotional banner with headline "New Collection"
2. A square Instagram post
3. A WhatsApp marketing image
4. A 6-second AI video for the product

Product: [paste image URL]

Agent will chain:

remove_background → promotional_banner → instagram_static_post →
whatsapp_marketing_post → generate_ai_video

Example B: Branded Video with Music and Voiceover

Prompt:

Generate a 5-second fashion video for this product, then add this music track to it, then add a voiceover saying "The new collection is here", and finally add our logo in the bottom-right corner.

Product images: [URLs]

Music: [audio URL]

Logo: [logo URL]

Agent will chain:

generate_fashion_video → (*attach audio*) → synthesize_video_speech →
add_watermark_to_video

Example C: Scale One Winning Ad Across a Catalog

Prompt:

I have a reference ad that performed really well. Clone its style onto each of these 4 products and generate individual banners and WhatsApp posts for each.

Reference: [URL]

Product 1: [URL]

Product 2: [URL]

Product 3: [URL]

Product 4: [URL]

Agent will chain:

clone_reference_creative (×4) → promotional_banner (×4) → whatsapp_marketing_post (×4)

Tips for the Demo

- **Start simple, then layer.** Show one tool first, then ask the agent to "now add a watermark" or "now turn this into a video" — the session memory handles continuity.
- **Reference products once.** After sharing a product image URL in a session, follow-up prompts can just say "use the same product" — the agent remembers.
- **Combine image + video.** Generate a styled product image, then say "make a 6-second video of this." The generated image feeds directly into the video prompt.
- **Test in Arabic.** Ask for Arabic TTS or a bilingual banner — it consistently impresses MENA clients.
- **Show the planner.** Give a 4-step request and let the agent write its plan before executing — it demonstrates reliability and transparency
