From idea to deployment, I build full-stack web applications that are fast, scalable, and production ready. Experienced in React, TypeScript, NestJS, ASP.NET Core, Angular, and PostgreSQL, with a focus on clean architecture, real-time features, and AI integrations.

Education

B.Sc. Software Engineering (2021-2025), *Jordan University of Science and Technology*

- GPA: 3.42 / 4.0 (Very Good, Honored Student)

Experience

OpsHeaven Technologies, *Full Stack Developer*

2026

Led end-to-end development of RequestHub, a Jira-like ticket management platform using React, TypeScript, NestJS, Prisma, and PostgreSQL.

- Auth system with JWT refresh tokens, permission based, and Socket.IO real-time notifications.
- Built an admin dashboard with AI-generated ticket summaries via OpenAI API, automated PDF reporting, and email workflows via Nodemailer.

Ministry of Higher Education and Scientific Research,

Nov 2025 – Feb 2026

Full Stack Developer Trainee

- Gained hands-on experience with ASP.NET Core, .NET framework, and SQL Server within the national Unified Admissions System.
- Worked on student information systems handling admissions and academic records, writing optimized SQL queries, stored procedures, indexing, triggers, and data validation routines.

Robotna, *AI Automation Intern*

2025

- Designed and deployed business process automation workflows using n8n, integrating third-party APIs to eliminate repetitive tasks.

Polaris Technology, *Trainee*

2025

Mendix Rapid Developer training, excelling as one of the top performers in task delivery and efficiency.

Certificates

Udemy - The MERN Fullstack Guide

React, NodeJS, Express & MongoDB

Udemy - Data Structure and Algorithms

Cisco - CCNA: Introduction to networking

Udemy - ASP.NET Core API and Angular

Full-stack course covering Angular 18 & ASP.NET Core 8 - JWT auth, SignalR, Entity Framework Core, and REST APIs.

Skills

Backend

NestJS, ASP.NET Core, Node.js, Express, Prisma, Entity Framework Core, REST API

Languages

C#, C++, Java, TypeScript, JavaScript

Frontend

React, Vite, Angular, Next.js

DevOps & Tools

Docker, Git, GitHub, Postman, Cloudinary, Supabase, OpenAI

Projects

RequestHub, *Full-Stack Request Management System*

2026

(OpsHeaven Company)

- A production ready ticket tracking platform where clients submit bugs and improvement requests, which are then routed and managed by assigned development teams.
- Features drag-and-drop workflow management, real-time notifications, role-based access for admins, clients, and team members, and AI-generated summaries for fast ticket triage.

AVO-Perfume [🔗](#), *Full-Stack E-commerce Website*

2026

- An e-commerce store with an admin dashboard for managing products, categories, and offers, built with React, NestJS, Supabase, and Cloudinary.
- Engineered a build-time static caching system to eliminate free-hosting cold-start delays, a custom script fetches the latest backend data at deploy time and stores it as static JSON files, keeping the store fast and available even when the backend is sleeping.
- Added an admin "Publish Website" feature that triggers a data refresh and redeployment, giving admins full control over live content updates.

WellnessCore [🔗](#),

2025

Fitness Web Application (Graduation Project)

- A full-stack fitness platform where admins manage trainers and trainees, therapists track client progress, and users access personalized workout and nutrition guidance.
- Engineered role-based JWT auth supporting four user roles, a community Q&A system, and an AI-powered fitness chatbot via OpenAI API.
- Built a food image analyzer that identifies meals and estimates nutritional content, with media managed via Cloudinary and data persistence via Supabase.

2024

Memory Game (Unity)

- Designed and developed a 2D memory game using Unity engine
